

ReFlex® thermoformed cushions have become the packaging material of choice for manufacturers of fragile electronics including Laptops, Hard Drives, and Desktop PCs. Now this technology is available to protect Flat Panel televisions and Monitors. Our award winning packaging is your best choice for product cushioning, cost savings and environmental protection. Reflex® cushions currently protect LCD televisions ranging from 27" to 52" for customers including HP and Westinghouse.

Environmental

Manufactured from 100% recycled PE content, ReFlex® cushions are environmentally preferred to all foam packaging materials. They are also 100% recyclable and reusable - an unbeatable environmental combination.

Configurations

ReFlex® ENDCAPS: Right and Left endcaps cushions are typically used to package units 32" or smaller in size. Endcaps require the fewest packaging components and minimize cost.

ReFlex® Folding Corners: The 4 corner pack offers simplified loading for heavy models measuring 37" or larger. Used in conjunction with an HSC container, this pack offers excellent protection combined with an efficient assembly.

Performance

Comprehensive customer testing has determined that Reflex® cushions offer protection levels which meet or exceed that of traditional EPO foam materials. High level impact protection ensures that your LCD arrives to the customer intact, and Reflex® does not crack, break apart, or particulate on impact like EPS foam. Your customers expect the best from you, why not expect more from your packaging?

Savings

ReFlex® cushions offer a direct cost savings versus traditional PE, PP, PU and mixed PS resin foams. In addition, Reflex® cushions **STACK** - foam does not. This unique feature may seem secondary, yet it has rewarded our customers with tremendous savings in warehousing and shipping costs. We can increase the quantity of packaging per pallet by up to 500%. This reduces the number of shipments needed, the number of pallets being delivered, the time spent moving pallets, etc. The effect is exponential and the bottom line is that we can save you money.
